A. Feeling Thermometer Change vs. Dyadic Disagreement
Change in Out-party Temperature (Degrees)
Dyadic Disagreement
β = -0.52 [-3.61, 2.57]
E. Trait Ratings Change vs. Dyadic Disagreement
Change in Trait Ratings (%)
Dyadic Disagreement
β = -0.24 [-3.91, 3.43]
B. Feeling Thermometer Change vs. Topic Partisanship
Change in Out-party Temperature (Degrees)
Topic Partisanship
β = -4.03 [-9.40, 1.35]
F. Trait Ratings Change vs. Topic Partisanship
Change in Trait Ratings (%)
Topic Partisanship
β = -2.05 [-8.44, 4.35]
C. Feeling Thermometer Change vs. Topic Contentiousness
Change in Out-party Temperature (Degrees)
Topic Contentiousness
β = -2.43 [-14.15, 9.29]
G. Trait Ratings Change vs. Topic Contentiousness
Change in Trait Ratings (%)
Topic Contentiousness
β = -0.65 [-14.59, 13.28]
D. Feeling Thermometer Change vs. Topic Identity Threat
Change in Out-party Temperature (Degrees)
Expected Identity Threat
β = -10.55 [-20.85, -0.24]
H. Trait Ratings Change vs. Topic Identity Threat
Change in Trait Ratings (%)
Expected Identity Threat
β = -3.47 [-15.74, 8.80]
Simple OLS regressions with [95% CI] shaded. X positions jittered to show overlap. Both waves of data collection included.
Theoretical range of predictors scaled to (0,1), range of data shown.
